

# Seminar on Experience and Potential of Using Artificial Intelligence (AI) in the Financial Sector

## Synopsis

Over the last years, artificial intelligence (AI) has been increasingly deeply embedded in all spheres of society, including the financial market. Technology affects a number of processes in lending, investing, risk management, and so on. In the context of the rapid development of technologies, the risks of which may not always be obvious, it is important to have a clear understanding of how AI is implemented and what are the approaches to its regulation in the financial sector.

### Questions and Answers:

1. How is artificial intelligence (AI) changing the financial sector (lending and risk assessment, optimization of investment strategies, etc.)?
2. How is the nature of risks in the financial sector transforming with the expansion of the use of AI in decision-making processes?
3. What approaches to AI regulation will ensure its ethical use in the financial market?
4. How do financial companies balance innovation and compliance with regulatory requirements?
